EtherMetrics completes NRTL certification with TÜV Rheinland of North America

EtherMetrics, an emerging source of leading-edge energy monitoring and management systems, has today announced that it has received NRTL certification through TÜV Rheinland of North America for its energy monitoring platform, the DataCube®.

Compliance certification through TÜV Rheinland, a Nationally Recognized Testing Lab (NRTL), means that DataCube® has met consensus-based standards of safety and provides the assurance, required by OSHA, that the DataCube® is safe for use in the workplace. The TÜV Rheinland mark, called cTUVus, is accredited by OSHA for the U.S. and SCC for Canada. The mark is recognized as the equivalent and direct replacement to the UL and CSA marks by city, county and state/provincial regulators throughout the U.S. and Canada.

EtherMetrics' innovative new product is a plug-and-play solution for customers looking to upgrade their energy management programs through energy monitoring. The DataCube® easily connects to any electric, water, gas or steam meter and provides real-time consumption data via a simple Ethernet interface.

Founded in 2007, EtherMetrics is located in Troy, New York. For more information, contact Ken Barclay at (518) 690-0395 or 1-877-ETHER-M, or via email at kbarclay@ethermetrics.com.
